

## Frontend

---

- [y2016p3q4 \(a\)](#)

### Grammar

- [y2004p4q1 \(a-e\)](#)
  - Operator associativity / precedence (textbook)
- [y2018p4q3 \(b\)](#)
  - ambiguity
- [y2002p4q2 \(a\)](#)
  - CFG

### Lexical (regex, FSA) & Syntax analysis/Parsing (CFG, PDA)

- [y2018p4q3 \(a\)](#)
- [y2002p4q2 \(b,c\)](#)
  - LEX / YACCtools
- [y2023p4q1 \(a\)](#)
- [y2007p4q4 \(a\)](#)
  - lexing

### Recursive Descent

- [y2004p4q1 \(f\)](#)

### LL(k)

- [y2022p4q1](#)
- [y2023p4q1 \(b\)](#)
- [y2020p4q4 \(d\)](#)
  - left recursion not LL(1)

### LR(k), SLR(k)

- [y2015p3q3](#)
  - LR(0) items, shift / reduce
- [y2020p4q4](#)
  - DFA
- [y2021p4q4](#)
- [y2023p4q1 \(c\)](#)
  - SLR(1) ACTION and GOTO

## Type Checking

- [y2019p4q3 \(a\)](#)
  - for user-defined data type

## Simplification

remove type information, remove locations

- [y2021p4q3 \(b\)](#)
  - remove syntactic sugar
- [y2020p4q3 \(b\)](#)
  - let binding
- [y2019p4q3 \(d\)](#)
  - remove nested patterns

## Backend

---

### Translation

CPS, defunctionalise, etc

- [y2017p23q4](#)
- [y2022p4q2](#)
- [y2023p4q2](#)
  - memory, stack ↓ and heap ↑
- [y2016p3q3](#), [y2014p3q5](#)
  - tail recursion

## JARGON

closure

- [y2018p4q3 \(c\)](#)
  - in functional programming

VM

stack-oriented intermediate code

- [y2020p4q3](#)
  - closure

```

(fun x -> e') e''
(i) evaluates e'' and pushes the result on the stack
(ii) creates a closure (c,k) for (fun x -> e') in the heap
and pushes a pointer to it on the stack.
> c = the address of the first instruction in e'
> k = the number of free variables of e' (excluding x)
[pop off k values from the stack and placed in the closure.]
(iii) apply the top of the stack to the argument below.
return

```

- [y2019p4q3 \(b,e\)](#)

```

LOOKUP STACK_LOCATION -2 # fetch the argument v from the stack
CALL sum                  # sum(v)
PUSH 3
ADD                        # sum(v) + 3
RETURN

```

- [y2016p3q4 \(b\)](#)
  - heap representation for pairs, machine instructions
- [y2005p5q6](#)
  - a parse tree of an expression
    - $\rightarrow_i$  stack-oriented intermediate code
    - $\rightarrow_{ii}$  machine code (register-oriented arch, e.g., RISC-V)
    - remove push-pop pairs
  - efficiency
- [y2000p3q3](#)
  - allocation and recovery of heap records, union type
  - arrays with non-manifest bounds, labels and GOTO commands

## Mixed topics

---

### Garbage Collection

- Reference Counting
- Tracing Collection
  - Mark and Sweep
  - Copy Collection
  - Generational Collection

### Past Papers

- [y2006p5q6 \(b\)](#)
  - Tracing Collection def
- [y2018p4q3 \(d\)](#)
  - Reference Counting

- [y2017p23q3 \(a-c\)](#)
  - Garbage, reference count overflow

## Opt

- [y2023p4q1 \(d\)](#)
- [y2021p4q3 \(a\)](#)
  - $(\text{map } f \text{ } l1) @ (\text{map } f \text{ } l2) = \text{map } f (l1 @ l2)$
- [y2017p23q3 \(d\)](#)
  - $(\text{map } f) \circ (\text{map } g) = \text{map } (f \circ g)$
- [y2018p4q3 \(g\)](#)
  - $\emptyset \times e$
- [y2016p3q4 \(c\)](#)
  - pair
- [y2013p3q4](#)
  - tail recursive to iteration

## Exception

stack-oriented code

- [y2019p4q4](#)
  - front-end, type safety, Optimise
- [y2011p3q4 \(c\)](#)
  - raise and handle

## Linking

- [y2001p6q6](#)

<code>.data</code>	<code>&lt;-</code>	<code>.symtbl</code>	<code>-&gt;</code>	<code>.strtab</code>
